

# NORTHERN EXPOSURE CLIMATE SECURITY

Northern Australia's defence facilities in the zone of 'near unlivable' conditions at 2.7°C global average warming

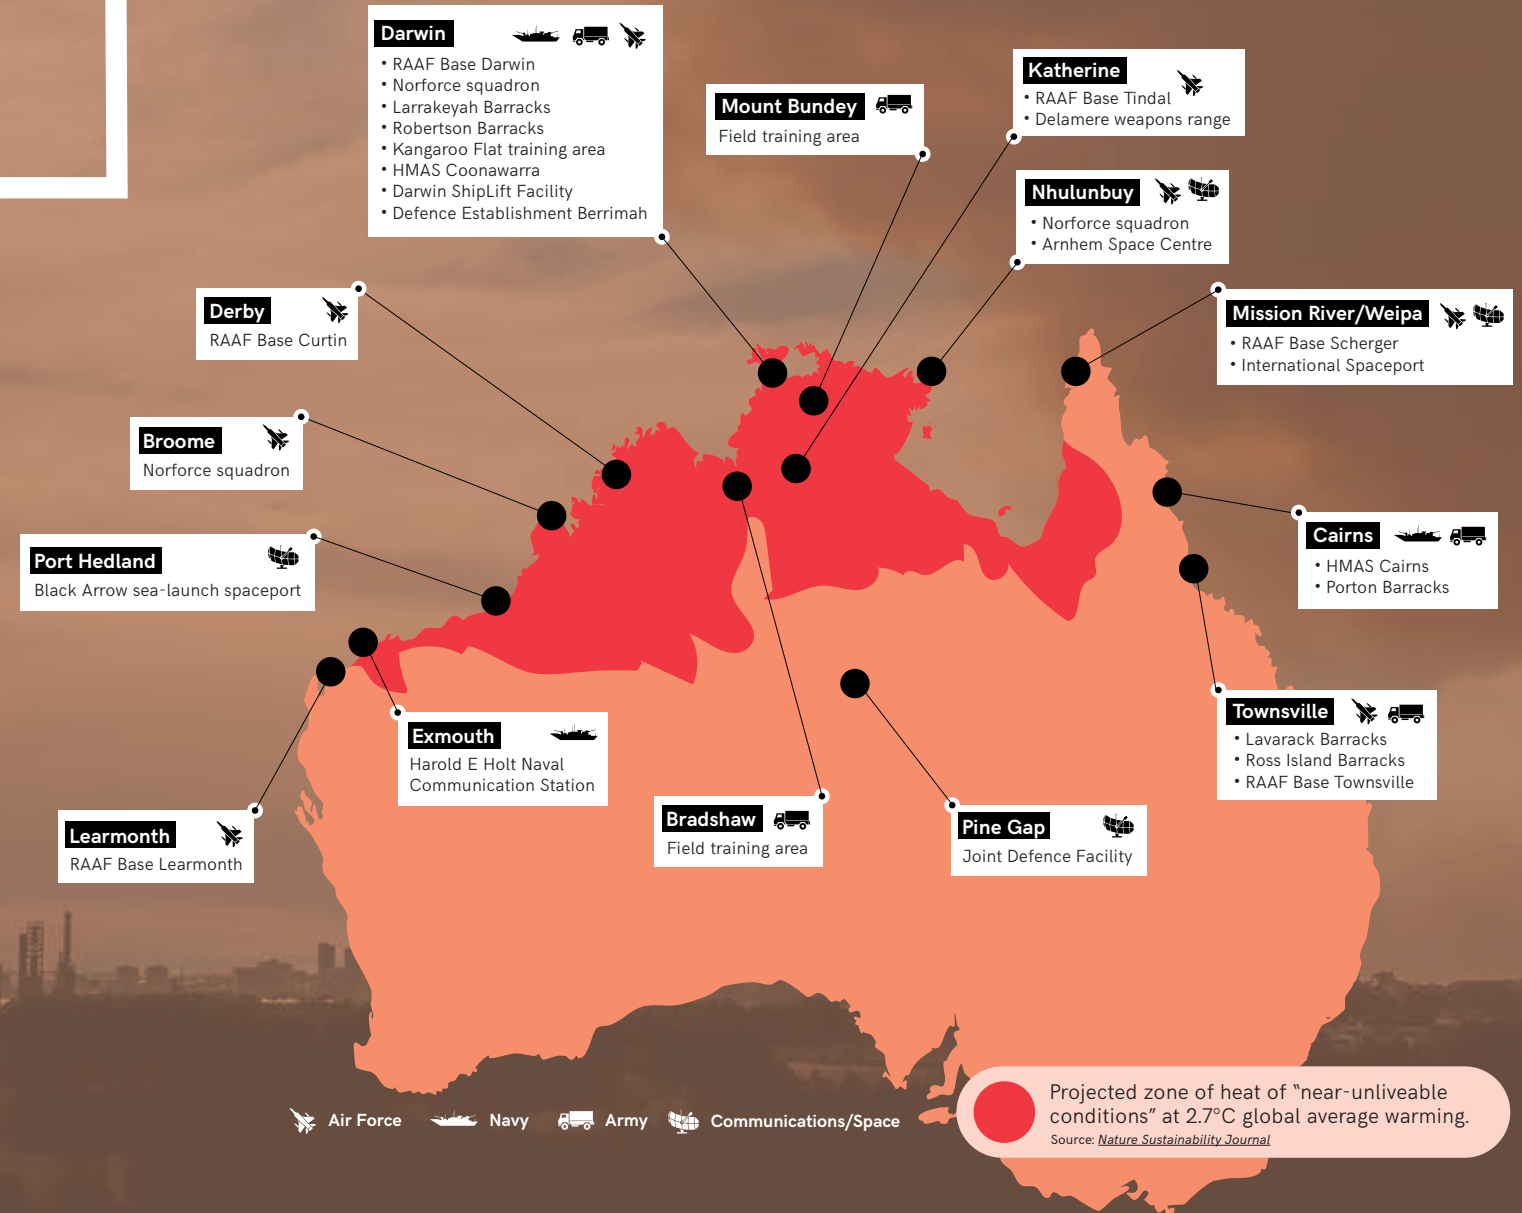

**AUSTRALIAN SECURITY LEADERS CLIMATE GROUP**

Climate change is a major security threat. The Australian Government is giving priority to the development of northern Australia, including fossil fuel energy resources, regional trade expansion, indigenous affairs and increased military presence in line with the Defence Strategic Review realignment.

But has the government fully considered the impacts of global warming on the future viability and liveability of that region? This question should be answered as a matter of urgency before irrevocable security commitments are made and substantial defense resources misallocated.
